** ***Directions for questions 1 and 2:*** These questions are based on the following information.

Each of the six persons L, M, N, O, P, and Q is of a different height.

M is taller than L but shorter than P. L is taller than only two persons but shorter than O. M is not the third tallest person. N is taller than Q. Third tallest person's height is 169cms. The second shortest person's height is 121cms.

1. If P + N = 300cms and O + Q = 280cms then what is the sum of the heights of the tallest and shortest person (in cms)?
(1) 270 (2) 275 (3) 285
(4) 290 (5) 295

2. If O + L = 304 and L + P = 317 then what is the possible height of M (in cms)?
(1) 185 (2) 168 (3) 172
(4) 183 (5) 196

** ***Directions for questions 3 to 5:*** These questions are based on the following information.

Six boys - A, B, C, S, T, and R – compared their weights. Each person is wearing a different colour t-shirt. One of the boys wears green colour t-shirt

Only one boy is lighter than T. Either T or R wears a white colour t-shirt. The tallest boy wears a red colour t-shirt. Only two boys are lighter than S and heavier than T. B is heavier than A but wears neither red nor blue colour t-shirts. The third heaviest boy wears a blue colour t-shirt. R is not the heaviest boy. The boy who wears a yellow colour t-shirt is heavier than the boy who wears a black colour t-shirt but lighter than the boy who wears a blue colour t-shirt.

3. Which of the following colour t-shirts does S wear?
(1) Red (2) Black (3) Green
(4) White (5) Yellow

4. How many boys are heavier than R?
(1) Two (2) Three (3) Five
(4) None (5) Four

5. Which of the following boys wears a yellow-coloured t-shirt?
(1) A (2) S (3) T (4) R (5) B

** ***Directions for questions 6 to 10:*** These questions are based on the following information.

Ten persons F to O live in a ten-storeyed building one on each floor. Consider the ground floor as the first floor, the floor which is immediately above the ground floor as the second floor, and soon. The following information is known about them.

N lives three floors above the floor on which M lives. Neither N nor M lives on either the topmost or ground floor. N lives on an even-numbered floor. The number of persons live below the floor on which M lives is the same as the number of persons live above the floor on which K lives. Only one person lives between the floors on which O and K live. G lives immediately below the floor on which O lives. The number of floors between the floors on which M and G live is one less than the number of floors between the floors on which K and H live. The floor on which L lives is immediately above the floor on which I lives. J lives on the even-numbered floor but not below the floor on which L lives.

6. Who lives on the seventh floor?
(1) J (2) N (3) K (4) F (5) H

7. If N and O interchange the floors they are on, then who lives immediately above the floor on which N lives?
(1) H (2) M (3) G (4) K (5) J

8. Four of the following five are alike in a certain way and hence form a group. Find the one who does not belong to that group.
(1) F (2) M (3) L (4) G (5) N

9. If all the persons live in alphabetical order from the ground floor to the top floor, then how many persons remain in the same position?
(1) One (2) Three (3) Four
(4) Two (5) No one

10. Who lives immediately above the floor on which H lives?
(1) N (2) F (3) J (4) M (5) K

** ***Directions for questions 11 to 15:*** These questions are based on the following information.

Six persons A to F – live in a building of three floors. Each floor has two flats – flat 1 and flat 2 in the same order from west to east. The ground floor of the building is considered floor 1, the floor immediately above floor 1 is considered floor 2 and so on. Each flat is built in such a way that flat 1 on floor 2 is immediately above the flat 1 on floor 1 and so on. Each person likes a laptops of different companies. One of the persons likes Lenovo laptops.

Anish Bhattacharya

D lives on an even-numbered floor but not in an even-numbered flat. The one who likes the Apple laptops lives below the floor on which D lives. Only one flat is there between the flats in which C and the person who likes Apple laptops live. The floor on which A lives in either immediately above or immediately below the floor on which B lives. Neither A nor B either lives on floor 3 or likes Apple laptops. A and B live in different numbered flats. F likes the Acer laptops. The one who likes the Avita laptops lives to the west of the flat in which the person who likes HP laptops lives. B likes neither HP nor Dell laptops.

11. Who lives in flat 1 on floor 1?
(1) A (2) C (3) F (4) B (5) E

12. Who likes Dell laptops?
(1) D (2) B (3) C (4) E (5) A

13. Which f the following statements is/are definitely true?
(1) The one who likes Avita laptops lives in an odd numbered flat.
(2) The one who likes Acer and Dell laptops live in the same numbered flat.
(3) E likes Apple laptops.
(4) The flat in which A lives is immediately below the flat in which F lives.
(5) More than one is true.

14. Who lives to the east of the flat in which the person who likes Lenovo laptops lives?
(1) D
(2) The person who likes Dell laptops.
(3) F
(4) The person who likes Apple laptops.
(5) C

15. Four of the following five are alike in a certain way and hence form a group. Find the one who does not belong to that group.
(1) B (2) D (3) E (4) C (5) F

** ***Directions for questions 16 to 20:*** These questions are based on the following information.

Nine boxes R to Z – are stacked one upon the other. box Y is placed four boxes above box V. Box U is placed below box V but not immediately below. Only two boxes are placed between boxes X and U. The number of boxes placed between boxes V and X is the same as the number of boxes placed between boxes X and S. Box R is placed immediately below box T but not placed at the bottom. The number of boxes placed between boxes W and Z is two more than the number of boxes placed between boxes R and W. Box Z is not placed immediately below box V.

16. How many boxes are placed between boxes V and W?
(1) Three (2) Four (3) One
(4) Two (5) No one

17. Which box is placed immediately below box Y?
(1) Box R (2) Box Z (3) Box V
(4) Box W (5) Box X

18. What is the position of box Z with respect to box X?
(1) Immediately above (2) Immediately below
(3) Four boxes above (4) Four boxes below
(5) Three boxes above

19. If the positions of the Boxes T and U are interchanged, then which box is placed immediately above box T?
(1) Box Z (2) Box W (3) Box V
(4) Box X (5) Box R

20. Four of the following five are alike in a certain way, and hence form a group. Find the one which does not belong to that group.
(1) Box Y, Box T (2) Box V, Box T
(3) Box R, Box X (4) Box S, Box U
(5) Box V, Box S

** ***Directions for questions 21 to 25:*** These questions are based on the following information.

Six people- Tarak, Vikram, Hari, Bhanu, Arjun, and Bheema visited six different places on six different days of the week starting from Sunday through Friday. Each person visited only one place. Only one place is visited on each day. No two persons visited the same place. The following information is known about them.

Tarak visited Virupaksha on one of the days before Friday but not before Wednesday. The person who visited India Gate visited two days before Tarak. The number of people who visited before the person who visited India Gate is one more than the number of persons who visited after Hari.

Bheema visited Sanchi Stupa but not before Bhanu. The person who visited Mahabalipuram visited on one of the days after Vikram visited, but not after the person who visited Khajuraho. Vikram neither visited Konark nor visited on Sunday. Arjun visited after Bhanu did, but visited on one of the days before Thursday.

21. Who visited Konark?
(1) Vikram (2) Hari (3) Bhanu
(4) Arjun (5) Bheema

22. How many persons visited after Bheema?
(1) Two (2) Three (3) One
(4) Five (5) None

23. Which of the following combinations is definitely false?
(1) Monday-Vikram – India Gate
(2) Friday- Hari – Khajuraho
(3) Thursday – Bheema - Sanchi stupa
(4) Sunday – Bhanu – Mahabalipuram
(5) None of the above

24. The number of persons who visited before the person who visited Mahabalipuram is the same as the number of persons who visited after _____?
(1) Tarak (2) Vikram (3) Hari
(4) Bhanu (5) Arjun

25. Which of the following places is visited by Vikram?
(1) Konark (2) Mahabalipuram
(3) India Gate (4) Sanchi Stupa
(5) Khajuraho

Akash Bhattacharjee

** ***Directions for questions 26 to 30:*** These questions are based on the following information.

Ten persons – A to J attend the party in ten different months – January, March, May, June, July, August, September, October, November, and December – in the same year but not necessarily in the same order. No two persons attend the party in the same month. The following information is known about them.

The number of persons who attend before J is the same as the number of persons who attend after A. Both J and A attend the party in a month which has 30 days. F attends party immediately after C attends. F and C attend the party in the months which has a different number of days. C attends the party in a month which has an even number of days. H attends the party immediately before J. The number of months (as per calendar) before H attended is the same as the number of months (as per calendar) after I attended. Only three persons attend between B and I. D attends after E but before G.

26. Who attended the party immediately before I?
(1) D (2) E (3) J (4) A (5) H

27. Four of the following five are alike in a certain way and hence form a group. Find the one which does not belong to that group.
(1) E (2) D (3) G (4) J (5) F

28. Who attended in July?
(1) J (2) A (3) D (4) G (5) H

29. There is a gap of how many months (as per calendar) between the months in which E and I attend?
(1) Five (2) Three (3) Four
(4) Eight (5) Six

30. How many persons attended the party before H?
(1) Three (2) Four (3) Five
(4) Two (5) No one

ADDITIONAL QUESTIONS FOR PRACTICE

** ***Directions for questions 1 to 5:*** These questions are based on the following information.

Six persons namely L through Q live in a six storeyed building one on each floor. The ground floor is considered the first floor, the floor which is immediately above the ground floor is considered the second floor and so on. Each person likes a pet animal among cat, pigeon, dogs, parrot, rabbit and hen. The following information is known about them.

The floor on which L lives is two floors below the floor on which the person who likes pigeon lives. L does not live on an odd numbered floor. The number of floors between the floors on which L and the person who likes cat live is two more than the number of floors between the floors on which the person who likes parrot and the person who likes cat live. Q, who likes hen lives three floors below the floor on which N lives. The number of floors above the floor on which N lives is the same as the number on floors below the floor on which M lives. The person who likes dog lives above the floor on which the person who likes hen lives but not adjacent to the floor on which the person who like pigeon lives. P likes neither cat nor parrot.

1. Who likes parrot?
(1) P (2) M (3) L (4) N (5) O

2. On which floor does P live?
(1) Floor 2 (2) Floor 5 (3) Floor 6
(4) Floor 3 (5) Floor 1

3. How many persons live between the floors on which O and the person who likes pigeon live?
(1) Two (2) One (3) Four
(4) Three (5) None

4. Who, among the following lives on the floor which is immediately above the floor on which Q lives?
(1) L (2) M (3) O (4) N (5) No one

5. In a certain way, the person who likes Dogs is related to N, in the same way Q is related to the person who likes rabbits. Which of the following is related to the person who likes hens?
(1) L
(2) The person who likes pigeon.
(3) The person who likes cat.
(4) O
(5) The person who likes parrot.

** ***Directions for questions 6 to 10:*** These questions are based on the following information.

Six boxes namely E, F, G, L, M and N – are stacked one upon the other but not necessarily in the same order. Each box contains one of the stationery items among books, pens, pencils, erasers, scissors and rulers. The following information is known about them.

Only two boxes are placed between box M and the box which contains pencils. The box which contains books is placed two boxes below box M. Box G and the box which contains pencils are placed one above another. Neither box G nor box L contains books. The box which contains scissors is placed immediately below the box N. Neither box N nor box M is placed at the top of the stack. The number of boxes placed below box G is the same as the number of boxes placed above the box F. The box which contains rulers is placed below the box which contains erasers but not immediately below . Neither box G nor box N contains erasers.

6. Which box contains erasers?
(1) Box N (2) Box M (3) Box F
(4) Box E (5) Box L

7. Which box is placed immediately below the box L?
(1) The box which contains books.
(2) The box which contains pens.
(3) The box which contains rulers.
(4) The box which contains scissors.
(5) The box which contains erasers.

8. Which of the following statements is/are definitely false?
(1) Box G is placed at the bottom.
(2) Box L contains rulers.
(3) Box M is placed immediately below the box L.
(4) Box N does not contain pencils.
(5) More than one is false.

9. In a certain way, the box which contains books is related to box G; in the same way box F is related to the box which contains rulers. Which of the following is related to box E?
(1) The box which contains scissors.
(2) The box which contains erasers
(3) Box M
(4) The box which contains pencils.
(5) Box G

10. The number of boxes placed above the box L is the same as the number of boxes placed below the box_____?
(1) Box E (2) Box F (3) Box N
(4) Box G (5) Box M

** ***Directions for questions 11 to 15:*** These questions are based on the following information.

Six cricket players Atharva, Parin, Gopilal, Hetwik, Mridul and Achyut live in a six storeyed building one on each floor. Consider the ground floor as the first floor, the floor which is immediately above the ground floor as the second floor and so on. Each person scored a different number of runs in a match. The following information is known about them.

No one lives above the floor on which Hetwik lives. The person who scored 53 runs lives below the fourth floor. The person who lives on the first floor, scored an even number of runs. Only one floor is there between the floors on which Mridul and the person who scored 22 runs live. The person who scored 22 runs is the least scorer. The person who scored 22 runs lives immediately below the floor on which the person who scored 53 runs lives.

The difference between the number of runs scored by the persons who live on the fourth floor and the second floor is 15. The number of runs scored by the person who lives on fourth floor is the second-least. Gopilal scored more runs than Parin. The floor on which Parin lives is immediately below the floor on which Hetwik lives. Parin scored 62 runs, which is an average runs of the runs obtained by Mridul, Atharva and Hetwik. Runs scored by Atharva are 21 runs less than the runs scored by Gopilal.

11. On which floor does Achyut lives?
(1) First Floor (2) Third floor
(3) Fifth floor (4) Second floor
(5) Fourth floor

12. What is the sum of the number of runs scored by Hetwik and Gopilal?
(1) 160 runs (2) 170 runs (3) 149 runs
(4) 158 runs (5) 118 runs

13. How many more runs are scored by Parin than Atharva?
(1) 9 runs (2) 11 runs (3) 15 runs
(4) 19 runs (5) 5 runs

14. Who scored the second-highest number of runs?
(1) Atharva (2) Parin (3) Gopilal
(4) Hetwik (5) Achyut

15. How many persons scored more runs than Mridul?
(1) Three (2) Two (3) Five
(4) One (5) Four
